THIRD INTERNATIONAL OPERATIONAL SATELLITE OCEANOGRAPHY SYMPOSIUM

The Executive Steering Committee is pleased to invite community members from all levels of the value chain, from data providers to users of operational satellite oceanographic data, products and applications, to attend the third international Operational Satellite Oceanography Symposium (OSOS-3). This Symposium will be held in-person with limited online viewing access (not fully hybrid). We hope to feature research in Asia and the Pacific, and high latitude. Talks will build upon past efforts engaging users on requirements and priorities, demonstrating the use of satellite data in coupled numerical models and emphasizing socio-economic benefits reaped from Earth Observation investment. Participants may elect to attend free training on accessing satellite data products and tools to enhance research.
